### How to read this report

Ranks are based on the seasonal average or sum from 1940 to present day. A value of 1 indicates the highest rank, while a rank of 85 indicates the lowest rank. Anomalies are calculated relative to a 1941-1970 average (baseline). Use of the term 'Territory' in the context of this document, refers to a country or dependency. For a full list of territories considered please see the list of countries and dependencies. To see more information on our methods, refer to our methodology document.
